

# Modules Update

Sam Tobin-Hochstadt  
1-31-2013

# Recap from November

- Modules no longer named by identifiers

```
module 'm' {  
    import 'x/y' as y;  
    export y;  
}
```

- Global registry of module names

# Nested Modules

```
module 'outer' {  
    let y = 1; // not exported  
    module 'inner' {  
        let z = y+1;  
        export z;  
    }  
}
```

```
import {z} from 'outer/inner';
```

# Dropped Features

- `export =`
- `export get/set`

# Loader Semantics

- 'import foo/bar' => fetches 'foo/bar.js'
- 'import ./foo' => relative to the file
- Work-in-progress specifying the details of loading
  - Ordering
  - Error behavior
  - Hooks
- New 'rewrite' hook
